Sprinter

Sprinter ST
Sprinter NT
Sprinter SW

INNOVATIVE AND ROBUST
TINE SEEDING TECHNOLOGY
Specialisation, growth, cooperation: due to rapid changes in agriculture, manufacturers of agricultural equipment are facing new challenges. Optimising the cultivation, seeding and harvesting process, reducing costs as well as increasing yields and quality of crops are our prime goals. As an innovative pioneer, HORSCH has become one of the leading manufacturers of cultivation and seeding technology. New technological standards are rigorously tested in our trials – standards of quality, precision and durability. HORSCH advises farmers on the development of individual cropping systems and farming strategies. Together with our distributors and service agents, HORSCH aims to provide the best customer service by ensuring that repairs are carried out swiftly and that spare parts are always available.

Three models to help you to achieve these aims

- Sprinter ST
  - 3 ST: tandem packer (without brake), tyre packer (with brake)
  - 4/6 ST: only tandem packer (with and without brake)
  - 8 ST: only tyre packer (with and without brake)
- Sprinter 8/9/12 SW: only tyre packer (with and without brake)
- Sprinter NT

Seeding with high precision

The multi-row frame of the Sprinter is carried by front wheels/front packer and the tandem tyre packer. The depth control is separate for each frame section. Thus, each section can adjust individually to the ground surface and place the seeds precisely at the set depth. When lifting or lowering the Sprinter, the whole frame is moved to ensure quick u-turns and an even start of operation.

The coulters are mounted on durable tines with a trip release system. The trip release system requires more than 200 kg of force to set off. This ensures consistent seeding depth – also in problematic soil types and conditions.

The coulters place the seeds in bands. A harrow provides even soil coverage (except for Sprinter 8 ST/12 SW). Finally, each seed band is consolidated with a tyre packer to guarantee good seed to soil contact (except for Sprinter NT).

Your benefits include:

- High efficiency by combining soil preparation, seeding and fertilisation in one pass
- Good performance (acreage per hour)
- Flexible handling
- Excellent levelling qualities
- Large tine stagger guarantees high trash clearance
- High coulter pressure (up to 285 kg for Sprinter ST/SW) ensures precise depth control
- Optimal seed to soil contact
- High efficiency due to large-capacity seed hoppers
- 3 to 12 metre working width for Sprinter ST and SW
- 11 to 24 metre working width for Sprinter NT

HORSCH. Working side by side with farmers

Soil preparation, seeding, fertilisation, consolidation

The Sprinter ST is a tine seeder that combines soil preparation, seeding and fertilisation in one pass. The robust Sprinter has clear advantages in min-till conditions, with lots of straw residues still remaining on the soil surface. Strong frame design, low draft coulters and large seed hoppers allow high performance with an excellent economic input/output ratio.

Several time-consuming processes are reduced to one pass, thus increasing the precision of seed and fertiliser placement. The gentle tyre packing system ensures optimal seed to soil contact. Not only does the use of the Sprinter result in better efficiency, but in an improved, even seed germination and stronger plants (HORSCH PPF system®). Ideal conditions for high yield potential are thereby created.

* not for Sprinter NT

All Sprinter ST are equipped with large-capacity seed hoppers up to 5,000 litres. The seed waggon of the Sprinter SW even has a capacity of 8,000 litres of seed and fertiliser for maximum efficiency. For the Sprinter NT the capacity is up to 17,000 litre.

The coulters are mounted on durable tines with a trip release system. The trip release system requires more than 200 kg of force in order to set off. This ensures consistent seeding depth – also in problematic soil types and conditions.

The coulters place the seeds in bands. A harrow provides even soil coverage (except for Sprinter 8 ST/12 SW). Finally, each seed band is consolidated with a tyred packer to guarantee good seed to soil contact (except for Sprinter NT).
COULTERS
SPECIALISED FOR INDIVIDUAL REQUIREMENTS

The HORSCH MultiGrip tine has balanced spring characteristics with a coulter pressure of 285 kg. The powerful set of springs ensures precise coulter setting and therefore seeding depth—even in heavy soil. High quality materials and large pivoting points make grease nipples unnecessary. The seed coulters of the Sprinters are arranged in 3 bars with a tine spacing from 25 cm to 32 cm (depending on the working width). (Sprinter 3/4/6 ST: 3-bar, Sprinter 8 ST: 2-bar, Sprinter 8/9 3S: 3-bar, Sprinter 12 3S: 2-bar).

Different coulters are available which can be changed easily. The coulters prepare a perfect seed bed. Like a cultivator they loosen, level, mix and crush the soil. The coulters remove stones, rough soil clods and straw residues from the area of seed placement. The seeds are placed with precision and the young plants can grow undisturbed and develop a strong root system.

The Sprinter NT chisel coulter sowing technology allows for a high amount of fine earth in the seed row and for the placement of the seed in a so-called “open furrow”. The seed coulter forms a furrow and removes lumps and organic material from the seed horizon.

Your benefits include:
— Optimal seed bed preparation
— Precise seed placement
— Simultaneous fertiliser placement with HORSCH PPF system optional (not for Sprinter NT)
— Low maintenance and wearing costs (Sprinter ST and SW)
— Sprinter NT ideal for no-tillage farming

HARROW AND TANDEM PACKER
LEVELLING, COVERING, CONSOLIDATION

To ensure proper seed coverage and an even soil/straw distribution above the seed bands, a 2-row harrow follows behind the coulters (for Sprinter 8 ST and 12 SW this is carried out via a disc levelling system). The harrow can be adjusted in height and angle.

At last, the tandem tyre packer consolidates the seed band. Sprinter 3 ST: tandem packer (without brake), tyre packer (with brake), Sprinter 6 ST: only tandem packer (with and without brake), Sprinter 8 ST: only tyre packer (with and without brake), Sprinter 8/9/12 ST: only tyre packer (with and without brake).
The packing system is aligned in such a way that each tyre follows exactly behind a coulter. Thus, each seed band is consolidated evenly and each seed has optimal soil contact. The tyres have a tractor profile tread and are filled with air.

Your benefits include:
— Precise depth control
— Even coverage of seeds
— Optimal seed to soil contact by aligning packing system with coulters
— Self cleaning tyre packer

The tractor profile of the tyres and the consistent tensioning of the rubber keep the tyres clean, also under wet conditions. For road transport, the middle section of the packing system acts as transport wheels, except for Sprinter NT which has an own chassis. An additional front packer on the Sprinter improves the crumbling and the levelling of the soil and facilitates an exact seed placement.
The Sprinter is a robust, compact and multifunctional tine seed drill available in working widths from 3 to 12 m. Due to the Duett coulters, it is possible to sow, fertilise (except for Sprinter 8 ST) and at the same time cultivate the soil effectively as well as produce fine soil in the area where the seed is placed.

The Sprinter tines effectively remove harvest residues from the seed horizon. Due to its large-capacity seed hopper, the Sprinter is a high hectare output machine.

The seed coulters of the Sprinter are arranged in 3 bars (Sprinter 8 ST and 12 SW in 2 bars) with a tine spacing of 25 cm to 32 cm. They prepare the seedbed in an optimal way. As with a cultivator tine, the soil is loosened, levelled, mixed and crushed.

Your benefits include:
- Universal use: after plough, minimum cultivation and direct sowing
- Sprinter ST: up to 4 000 l seed or 5 000 l seed + fertiliser
- Sprinter SW: up to 8 000 l seed or 4 000 l seed + 4 000 l fertiliser
- Working speeds of 8–15 km/h
- Tines remove harvest residues effectively from the seed horizon
- High coulter pressure (285 kg) for exact depth control
- Low horsepower requirement
- Seeding coulters and tools for mixing, crushing and levelling
- Specific consolidation in the germination zone
- High efficiency of the Sprinter with large hopper for fertiliser and seed

Large seed hopper

The seed waggon 8 000 SW of the Sprinter SW has a capacity of 8 000 litres (partition 50% seed/50% solid or liquid fertiliser).

Good manoeuvrability

A two-point pivoting headstock links the compact Sprinter with the tractor. Tractors with wide tyres can make close turns, up to 90°. Any mechanical drives were eliminated.

Precise depth control

The Sprinter is carried and the seeding depth controlled by two front wheels, the tandem packer* and the tractor. A front packing system is optional and supports precise depth control.

PPF system for granular or liquid fertiliser

The Sprinter ST/SW can be equipped with the HORSEH PPF system (Precision Placement of Fertiliser). The granular or liquid system includes a two compartment hopper for seed and fertiliser on the SW.

Your benefits include:
- Compact design
- Good manoeuvrability and low draft requirement
- Easy to use
- Large seed hopper

---

*Sprinter 8 ST and 8 ST/12 SW: only type packer (with and without brake)
The Sprinter NT with 11 and 24 metre working width stands for maximum efficiency. The HORSCH NT chisel coulter sowing technology allows for a high amount of fine earth in the seed row and for the placement of the seed in a so-called “open furrow”.

The seed coulter forms a furrow and removes lumps and organic material from the seed horizon. The seed is placed into this furrow and fixed in the wet soil by the press wheel. Thus, very good emergence is achieved even under extreme climatic conditions. Sowing is possible into cultivated as well as into uncultivated soil. The seed drill is ideal for no-till farming.

The Sprinter 24 NT achieves maximum efficiency due to its working width and the corresponding seed hopper SW 17000 SD with a hopper capacity of 17 000 litre.

The 11/15 metre wide version has some particular characteristics: Seed waggon and seed unit are a more compact unit. Moreover, the Sprinter 11/15 NT is equipped with a slightly smaller seed waggon with a capacity of 12 000 litre.

**The advantages of the Sprinters at one glance:**

- Optimal seed drill for no-till farming
- Perfect for professional large farms
- Seed horizon is free from straw and lumps
- Sowing into the open furrow: Seed grain falls in wet soil for optimum germination conditions.
- Press wheel fixes seed grain in the wet soil
- Maximum efficiency due to a hopper capacity of up to 17 000 litre
- Hydr. coulter pressure adjustment with overload protection

---

--- Sprinter 11/15 NT: compact with low power demand
--- Partitioned hopper allows for a simultaneous placement of seed and fertiliser in the seed furrow
--- User-friendly: Almost no moving and very low-wearing parts at the seed elements
--- Tine bearing in rubber elements: robust and maintenance-free
--- All components are very easy accessed
PPF SYSTEM

PPF system – Precise and efficient placement of fertiliser

- Precise placement of nutrients close to the plant
- Quick and sustainable fertiliser effect
- High efficiency of fertiliser
- High stability of fertiliser
- Good plant tolerance also with large fertiliser quantities
- High economic viability of fertiliser usage
- Available as an option for Sprinter ST and SW (except for Sprinter 8 ST)

MICRO-GRANULAR COMPOUND

Micro-granular unit for Sprinter 3/4/6 ST

- Resilient auger metering device made of stainless steel
- Easy calibration
- Electronic control of the metering quantity
- Direct feed-in into the seed pneumatics
- For Sprinter 4 and 6 ST application of up to three components is possible (seed, fertiliser and micro-granular compound)

PPF system – Precise and efficient placement of fertiliser

- Precise placement of nutrients close to the plant
- Quick and sustainable fertiliser effect
- High efficiency of fertiliser
- High stability of fertiliser
- Good plant tolerance also with large fertiliser quantities
- High economic viability of fertiliser usage
- Available as an option for Sprinter ST and SW (except for Sprinter 8 ST)

PPF system – Precise and efficient placement of fertiliser

- Precise placement of nutrients close to the plant
- Quick and sustainable fertiliser effect
- High efficiency of fertiliser
- High stability of fertiliser
- Good plant tolerance also with large fertiliser quantities
- High economic viability of fertiliser usage
- Available as an option for Sprinter ST and SW (except for Sprinter 8 ST)

- Available as an option for Sprinter ST and SW (except for Sprinter 8 ST)
HORSCH Intelligence

The future machines think actively and HORSCH Intelligence makes it possible. With intelligent software and electronic solutions HORSCH seed drills work even more efficiently and help you to save both money and increase confidence.

HORSCH seed drill are always equipped with the ISOBUS standard. This does not only mean that every HORSCH machine can be controlled with any ISOBUS terminal. Additionally, SectionControl, VariableRate as well as the TaskController for data processing is a standard equipment for every HORSCH seed drill.

SectionControl

ISOBUS SectionControl allows for switching off individual sections automatically via GPS. The current position is determined, thus at field boundaries, on the headlands, in case of overlaps or in pre-defined areas individual sections (half-widths) or the whole working width is shut off automatically.

When using a HORSCH Touch 800/1200 Terminal you can additionally use the MultiControl function. This function independently switches on and off the application of fertiliser and seed.

Without MultiControl either fertiliser or seed can be switched on and off at the right time.

Advantages of SectionControl:
- Saving seed and fertiliser as overlaps on the headlands and at field boundaries are reduced to a minimum
- Constant working quality on the whole field
- Productivity increase under various conditions (day and night, fog)
- Reduced stress for the driver
- Protection of the environment

VariableRate

ISOBUS VariableRate allows for a site-specific application of seed and fertiliser. Thus, with an appropriate application card for every section within a field the optimum quantity of fertiliser and seed can be applied. When using a HORSCH Touch 800/1200 Terminals you can additionally use the MultiControl function. This function allows for independently varying the amount of fertiliser and seed.

Without MultiControl the application rate of either fertiliser or seed can be varied.

Advantages of VariableRate:
- Saving of seed and fertiliser as only the necessary quantity is applied
- Regular emergence due to optimum number of grains/m²
- Simple and quick documentation
- The different application rates are documented automatically
- Uncomplicated transmission to the acreage index
- Reduced stress for the driver
- The optimum application rate is automatically used on the fields
- Protection of the environment
- Only the necessary amount of fertiliser is applied

TaskController

The ISOBUS TaskController transfers data from the PC to the terminal in an uncomplicated way. It is also possible to transfer application rates, sown area and other data that were recorded while sowing from the terminal to the PC. This facilitates the administration of the acreage index. Via the integrated order management system orders can be created and executed.

Advantages of the TaskController:
- Uncomplicated data exchange
- Automatic documentation
- Structured working due to data management
- Simple administration of the acreage index
- Simple accounting and proof for contract services

VariableRate allows for applying adapted quantities of fertiliser and seed on the basis of application cards.

VariableRate takes different types of soil into account.

Type 1
- Soil quality: high
- Seed: 300 grains/m²
- Fertiliser: 2.8 dt/ha PK

Type 2
- Soil quality: medium high
- Seed: 270 grains/m²
- Fertiliser: 2.5 dt/ha PK

Type 3
- Soil quality: medium low
- Seed: 250 grains/m²
- Fertiliser: 2.3 dt/ha PK

Type 4
- Soil quality: low
- Seed: 220 grains/m²
- Fertiliser: 2.0 dt/ha PK
